GLASS

How is that glass is not a solid?

When cooled, glass **is formed** in a state that allows molecules within the glass to continue moving around.

quartz

glass

How much time it takes to glass to decompose?

Durable and resilient, glass is one of the longest lasting man-made materials. Glass **is decomposed** in approximately one million years.

lava can turn into glass?

Volcanic Lava Can Turn into Glass. Obsidian, a type of natural glass, **is formed** when hot lava cools quickly after being expelled from a volcano.

It is glass 100% Recyclable?

Glass can be **recycled** endlessly without losing any quality or purity.

How is glass formed?

By mixing lime, soda ash and heating to extremely high temperatures, glass **is produced**.

How to change glass color?

Different colors of glass **are obtained** by combining other minerals (such as nickel oxide produces a violet color).
